ABB MEASUREMENT & ANALYTICS | DATA SHEET

# WaterMaster

## Electromagnetic flowmeter

## Measurement made easy

The perfect fit for all water and waste water applications

### **State-of-the-art technology**

- revolutionary data storage enables transmitter interchange and commissioning without the need for re-configuration
- self-calibrating transmitter with ultra-low temperature coefficient for highest accuracy

### **Versatile and simple configuration**

- 'Through-the-Glass' (TTG) configuration eliminating the need to remove the cover
- smart key based functionality
- 'Easy Setup' function

### **VeriMaster in situ verification software option**

- enables the customer to perform in situ verification of the flowmeter system

### **Unparalleled service ability**

- fault-finding Help texts on the display
- minimized downtime with replaceable electronics cartridges

### **MID and OIML R49 approved with R49 self-checking**

- type-approved to accuracy Class 1 and Class 2 for any pipe orientation and bidirectional flows
- type P-approved continuous self-checking of the sensor and transmitter to ensure the highest accuracy and long-term performance

## The Company

ABB is an established world force in the design and manufacture of instrumentation for industrial process control, flow measurement, gas and liquid analysis and environmental applications. As a world leader in process automation technology our worldwide presence, comprehensive service and application-oriented know-how make ABB a leading supplier of flow measurement products.

## Introduction

### Setting the standard for the Water Industry

The WaterMaster range, available in sizes 10 to 2400 mm ( $\frac{3}{8}$  to 96 in.), is designed specifically for use on the many diverse applications encountered in the Water and Waste-water industry. The modular design concept offers flexibility, cost-saving operation and reliability while providing a long service life and exceptionally low maintenance.

Integration into ABB asset management systems and use of the self-monitoring and diagnostic functions increase the plant availability and reduce downtimes.

### VeriMaster – the verification tool

An easy-to-use utility, available through the infra red service port. Uses the advanced self-calibration and diagnostic capability of WaterMaster, coupled with fingerprinting technology, to determine the accuracy status of the WaterMaster flowmeter to within  $\pm 1\%$  of its original factory calibration. VeriMaster also supports printing of calibration verification records for regulatory compliance.

### Diagnostic functions

Using its diagnostic functions, the flowmeter monitors both its own operability and the process. Limit values for the diagnostic parameters can be set locally. When these limits are exceeded, an alarm is tripped. In the event of an error, diagnostic-dependent help text appears on the display. This considerably simplifies and accelerates the troubleshooting procedure.

In accordance with NAMUR NE107, alarms and warnings are classified with the status of 'Maintenance Required', 'Check Function', 'Failure' and 'Out of Specification'.

### Flow performance

Utilizing its advanced filtering methods, the WaterMaster improves accuracy even under difficult conditions. WaterMaster has an operating flow range with  $\pm 0.4\%$  accuracy as standard ( $\pm 0.2\%$  optional) in both forward and reverse flow directions.

### Easy and quick commissioning

'Fit-and-Flow' data storage inside WaterMaster eliminates the need to match sensor and transmitter in the field. On initial installation, the self-configuration sequence automatically replicates into the transmitter all calibration factors, meter size and serial numbers, as well as customer site-specific settings, eliminating the potential for error.

### Intuitive, convenient navigation

The 'Easy Setup' function reliably guides unpracticed users through the menu step by step. The smart key based functionality makes handling a breeze – it's just like using a cell phone. During configuration, the permissible range of each parameter is indicated on the display and invalid entries are rejected.

### Universal transmitter – powerful and flexible

The backlit display can be rotated easily without the need for tools. The contrast is adjustable and the display fully-configurable. The character size, number of lines and display resolution (number of decimal points) can be set as required. In multiplex mode, several different display options can be pre-configured and invoked one after the other.

The smart modular design of the transmitter unit enables easy disassembly without the need to unscrew cables or unplug connectors. HART is used as the standard communications protocol. Optionally, the transmitter is available with PROFIBUS DP or MODBUS communication.

### Assured quality

WaterMaster is designed and manufactured in accordance with international quality procedures (ISO 9001) and all flowmeters are calibrated on nationally-traceable calibration rigs to provide the end-user with complete assurance of both quality and performance of the flowmeter.

## ...Introduction

### WaterMaster – always the first choice

WaterMaster sets the standard for the water industry. The specification, features and user benefits offered by this range are based on ABB's worldwide experience in this industry and they are all targeted specifically to the industry's requirements.

### Submersible and buriable

WaterMaster sensors have a rugged, robust construction to ensure a long, maintenance-free life under the arduous conditions experienced in the Water and Waste Industry. The sensors are, as standard, inherently submersible (IP68, NEMA 6P), thus ensuring suitability for installation in chambers and metering pits that are susceptible to flooding.

A unique feature of the WaterMaster sensors is that sizes DN40 to DN2400 (1½ to 96 in. NB) are buriable; installation simply involves excavating to the underground pipe, fitting the sensor, cabling back to the transmitter and then backfilling the hole.

The WaterMaster family

### Overview of the WaterMaster

A wide range of features and user benefits are built into WaterMaster as standard:

- bi-directional flow
- unique self-calibrating transmitter (patented) for the ultimate in stability and repeatability
- OIML-type continuous self-checking, with alarms, ensures both sensor and transmitter accuracy
- true electrode and coil impedance measurement
- comprehensive simulation mode
- universal switch-mode power supply (options are available for AC and DC supplies)
- comprehensive self-diagnostics compliant with NAMUR NE107
- programmable multiple-alarm capability
- bus options: HART (4 to 20 mA), PROFIBUS DP (RS485), MODBUS (RS485)
- 3 configurable pulse / frequency and alarm outputs
- advanced infrared service port supports remote HMI, HART, cyclic data out and parameter download
- VeriMaster in situ verification software available as option
- read-only switch and ultra-secure service password for total security

### OIML / MID approved

WaterMaster has been type tested and Internationally approved to the highest accuracy class 1 and 2 for cold and hot potable water meters – OIML R49-1 (Organisation Internationale de Métrologie Légale). For full details, OIML R49 is available to download from [www.oiml.org](http://www.oiml.org). Its requirements are very similar to other International standards, such as EN14154 and ISO4064.

WaterMaster has been assessed by type approval at the National Measurement Office (NMO) to OIML R49 and passed to the very highest accuracy designations for sizes DN40 to DN200 (1½ to 8 in. NB).

The approval is for:

- Class 1 and Class 2 accuracy (calibration option)
- Environmental class T50 for water temperatures of 0.1 to 50 °C (32.18 to 122 °F)
- Electromagnetic Environment E2 (10 V/m)
- Any pipe orientation
- 5 Diameters upstream pipe
- 0 Diameters downstream pipe
- Pressure Loss Class <0.25 bar (3.62 psi)
- Integral or remote transmitter (<200 m [ $<656$  ft.] cable)
- DN40 to DN200 (1½ to 8 in. NB), bi-directional flow

A major advance in WaterMaster is the self-checking capabilities that meet and exceed the R49 requirements and is the first electromagnetic flowmeter to be approved to OIML Type P permanent self checking during normal operation (not just at startup) and alarm indication for:

- transmitter and sensor status, with an accuracy alarm
- program ROM and RAM status
- double, independent storage of totalizer values, in both the sensor and transmitter non-volatile memories
- display test

The OIML R49-1 certificate of conformity is available from:

[http://www.abb.com/product/seitp330/  
b42ec2377d3293cdc12573de003db93b.aspx](http://www.abb.com/product/seitp330/b42ec2377d3293cdc12573de003db93b.aspx)

WaterMaster is also approved under the EU Measuring Instruments Directive (MID) 2004/22/EC, that covers putting into use water flowmeters for certain applications. MID WaterMaster is secured against tampering and is available as an option, along with fingerprinting for ABB VeriMaster in situ verification product, with certificate printout to  $\pm 1\%$  accuracy.

WaterMaster certificates of EC type-examination of a measuring instrument are available from:

[http://www.abb.com/product/seitp330/  
b42ec2377d3293cdc12573de003db93b.aspx](http://www.abb.com/product/seitp330/b42ec2377d3293cdc12573de003db93b.aspx)

### Superior control through advanced sensor design

The innovative, patented octagonal sensor design improves flow profile and reduces up- and down-stream piping requirements for the most commonly used sizes of 40 to 200 mm (1½ to 8 in.). This optimized full bore meter provides impressive results in the most difficult of installation requirements.

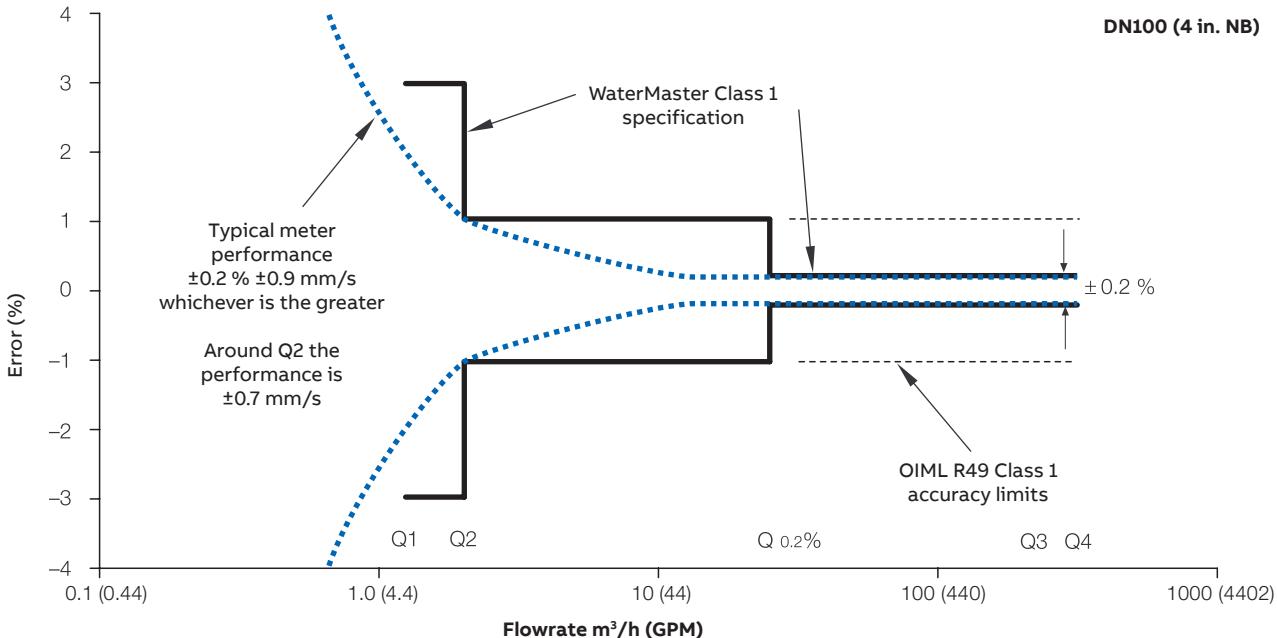

WaterMaster sensors are also available in reduced-bore geometries giving the ultimate in low-flow performance with a very high turn-down range.

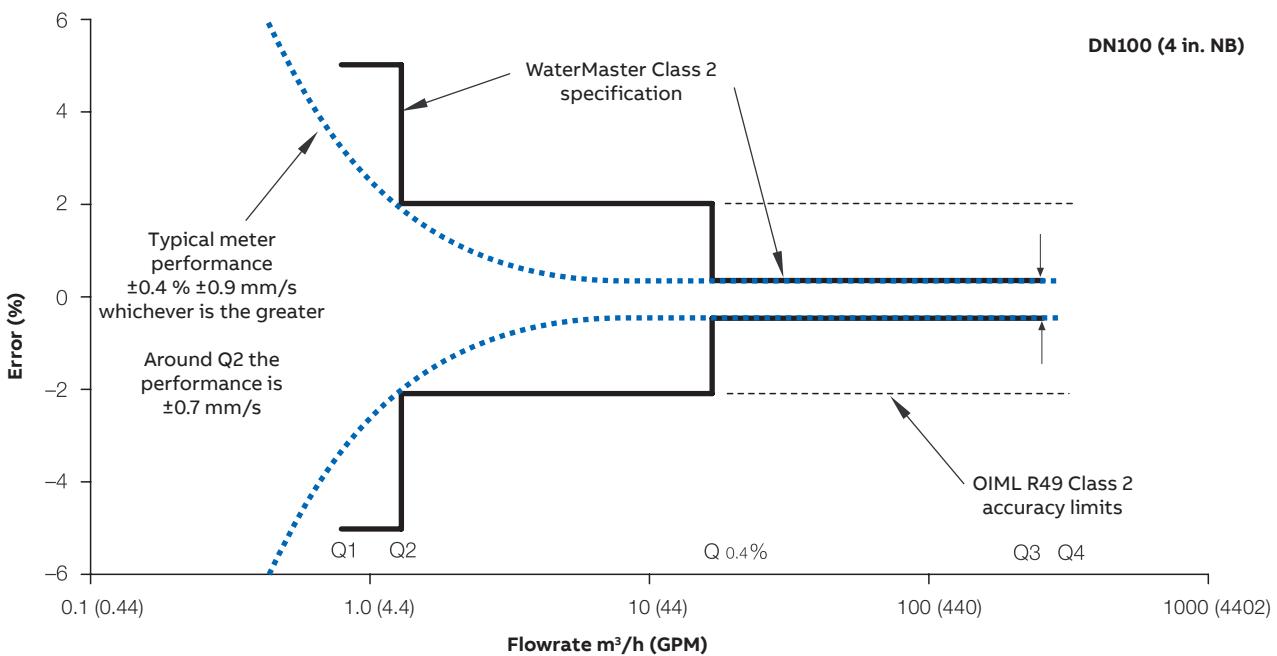

The unique design of the reduced-bore sensor conditions the flow profile in the measuring section so that distortions in the flow profile, either upstream or downstream, are flattened. The result is excellent in situ flowmeter performance, even with very bad hydraulic installation conditions.

## Specification

### WaterMaster specification to OIML R49 Class 1

### WaterMaster specification to OIML R49 Class 2

Although OIML R49 does not define the flow accuracy below Q1, WaterMaster continues to measure flow at lower flow rates down to a cutoff velocity of  $\pm 5 \text{ mm/s}$  ( $\pm 0.2 \text{ in./s}$ ). The accuracy between cutoff and Q1 is typically  $\pm 0.9 \text{ mm/s}$  ( $\pm 0.04 \text{ in./s}$ ).

## Specification – Sensor

### Functional specification

#### Temperature limitations

Ambient temperature	
Remote transmitter	-20 to 70 °C (-4 to 158 °F)
Integral transmitter	-20 to 60 °C (-4 to 140 °F)
Process temperature	See table below.
	0.1 to 50 °C (32.2 to 122 °F)
	OIML R49 T50 Approved

Medium temperature °C (°F)				
Code	Lining	Flange material	Minimum	Maximum
FEF, FEW3	Hard rubber	Carbon steel	-10 (14)	80 (176)
		Stainless steel	-10 (14)	80 (176)
FEW1	PTFE	Carbon steel	-10 (14)	80 (176)
		Stainless steel	-25 (-13)	80 (176)
FEW3	PTFE	Carbon steel	-10 (14)	80 (176)
		Stainless steel	-10 (14)	80 (176)
FEW3	Elastomer	Carbon steel	-5 (23)	80 (176)
		Stainless steel	-5 (23)	80 (176)
FEF, FER	Elastomer	Carbon steel	-6 (21)	70 (158)
FEV	Polypropylene		-6 (21)	70 (158)

#### Pressure limitations

- As flange rating
- PN25 Max Process Temp 50 °C (122 °F)
- PN40 Max Process Temp 40 °C (104 °F)
- OIML / MID Approved Meters 16 bar (232 psi)
- UL Fire Service approved meters 285 psi

#### Pressure equipment directive 97/23/EC

This product is applicable in networks for the supply, distribution and discharge of water and associated equipment and is therefore exempt.

#### IP rating

IP68 (NEMA 6) to 7 m (20 ft.) depth

**Note.** Not sizes DN10 to DN32 (3/8 – 11/4 in. NB)

IP67 (NEMA 4X) – DN10 to DN32 (3/8 – 1¼ in. NB)

#### Buriable (sensor only)

FEV, FEF and FEW – DN450 to 2400 (18 to 96 in. NB)  
to 5 m (16 ft.) depth

#### Conductivity

>20 µS cm<sup>-1</sup>

#### Transmitter mounting

Integral (not FEF) or remote

#### Electrical connections

20 mm glands

½ in. NPT

20 mm armored glands

#### Sensor cable

ABB WaterMaster cable available in two forms –  
standard and armored

Maximum length 200 m (660 ft.)

#### Suspended solids

Suspended solids percentage of process medium should  
not exceed 6 % of total volume

### Physical specification

#### Wetted parts

#### Electrode material

Stainless steel 316 L / 316 Ti

Super-austenitic steel

Hastelloy® C-22 and Hastelloy C4

(other electrode materials available on request)

#### Potential equalizing rings

Minimum of 1 recommended

#### Lining material / potable water approvals

Potable Water Approvals						
Code	Size Range	Liner	WRAS DN10 to 32 (¾ to 1¼ in. NB)	WRAS 60°C DN10 to 600 (⅜ to 24 in. NB)	ACS DVGW	NSF
FEW1	DN10 to 32 (¾ to 1¼ in. NB)	PTFE	✓			
FEW3	DN10 to 600 (⅜ to 24 in. NB)	PTFE				
FEW3	DN40 to 2400 (1½ to 96 in. NB)	Elastomer	✓			✓
FEW3	DN40 to 2400 (1½ to 96 in. NB)	Hard rubber	✓	✓	✓	NSF approved material
FEV	DN40 to 200 (1½ to 8 in. NB)	Poly-propylene	✓	✓	✓	NSF-61 ✓
FEF	DN250 to 600 (10 to 24 in. NB)	Elastomer	✓	✓	✓	NSF-61 ✓
FEF	DN250 to 600 (10 to 24 in. NB)	Hard rubber	✓	✓	✓	NSF approved material
FER	DN40 to 600 (1½ to 24 in. NB)	Elastomer	✓	✓	✓	✓

\*Size is dependent on flange specification

#### Lining protection plates

Not required

#### Installation conditions (recommended)

	Straight pipe requirements	
	Upstream	Downstream
FEW / FEF	5 x DN	2 x DN
FEV	5x DN	0 x DN
FER	0 x DN	0 x DN

#### Pressure loss

Negligible at Q3

<0.25 bar (<3.62 psi) at Q3

All full bore meters

FEV (DN40 to 200

[1½ to 8 in. NB])

<0.63 bar (<9.13 psi) at Q3

FER (DN40 to 600

[1½ to 24in. NB])

---

## ...Specification – Sensor

### Non-wetted parts

#### Flange material

Carbon steel	DN20 to DN2400 (¾ to 96 in. NB)
Stainless steel	DN10 to DN2400 (⅜ to 96 in. NB)
SG iron	FEV – DN40 to DN150 [1 ½ to 6 in. NB) FER – DN40 to DN150 [1 ½ to 6 in. NB)

#### Housing material

Carbon steel	FEV – DN40 to 200 (1½ to 8 in. NB) FEW – DN450 to 2400 (18 to 96 in. NB)
Plastic FEF –	DN250 to 600 (10 to 24 in. NB)
Aluminium	FEW – DN10 to 400 (⅜ to 16 in. NB)

#### Terminal box material

Polycarbonate

#### Cable gland material

Plastic, brass

#### Paint specification

Zinc-based primed (all sensors), paint coat ≥70 µm thick  
RAL 9002 (light grey), in accordance with C4 paint standard

## Specification – transmitter

### Functional specification

#### Power supply

Mains	85 to 265 V AC @ <7 VA
Low voltage	24 V AC +10 % /-30 % @ <7 VA
DC	24 V ±30 % @ <0.4 A

Supply voltage fluctuations within the specified range have no effect on accuracy

#### Digital Outputs (3)

Rating 30 V @ 220 mA, open collector, galvanically isolated*
Maximum output frequency 5250 Hz
1 off dedicated to Alarm / Logic, programmable function
2 off configurable to either Pulse / Frequency or Alarm / Logic function

#### Current output – HART FEX100 variant

4 to 20 mA or 4 to 12/20 mA, galvanically isolated*
Maximum loop resistance 750 W
HART protocol Version 5.7 (HART registered)
Signal levels compliant with NAMUR NE 43 (3.8 to 20.5 mA)
Low alarm 3.6 mA, High alarm 21.8 mA

#### Additional accuracy

±0.1 % of reading

Temperature coefficient: typically <±20 ppm/°C

#### RS485 Communications – PROFIBUS FEX100-DP variant

Registered name: FEX100-DP

RS485 (9.6kbps to 1.5Mbps), galvanically isolated

DPV0, DPV1

PA Profile 3.01

Standard idents: 9700, 9740, 9741

FEX100-DP specific ident: 3431

3 Concurrent MS2 master connections

#### RS485 Communications – MODBUS FEX100-MB variant

MODBUS RTU protocol

RS485 (9.6kbps to 115.2kbps), galvanically isolated

#### Electrical connections

20 mm glands ½ in. NPT, 20 mm armored glands

#### Temperature limitations

Ambient temperature -20 to 60 °C (-4 to 140 °F)

Temperature coefficient Typically <±10 ppm/°C @ Vel ³0.5 mls

#### Environmental protection

Humidity: 0 to 100 %

Rating: IP67 (NEMA 4X) to 1m (3.3 ft.) depth

#### Tamper-proof security

Write access prevented by internal switch combined with external security seals for MID applications

#### Languages

English, French, German, Italian, Spanish, Polish

#### Infrared service port

USB adapter (accessory), USB 1.1. and 2.0 compatible

Driver software for Windows 2000, XP, 7 (32-bit) and Vista

#### Housing material

Powder-coated aluminium with glass window

#### Paint specification

Paint coat ³70 µm thick RAL 9002 (light grey)

#### Transmitter vibration testing

Vibration level: 7 m/s²

Frequency range: 20 to 150 Hz

No. of sweeps in 3 orthogonal planes: 20

Undetectable shift in transmitter span or zero performance

#### Hazardous approvals

FM & FMc Class 1 Div 2

(FM listing NI / 1 / 2 / ABCD / T4, S / II, III / 2 / FG /T4,

Ta=60C; Type 4X, IP67 – for transmitter and integral mounting

Ta=70C, Type 6P, IP68 – for remote sensor type,

IP67 on DN10 to 32 [3/8 to 11/4 in.NB])

(FMc listing NI / 1 / 2 / ABCD / T4, DIP / II, III / 2 / FG /T4, Ta=60C; Type 4X, IP67 – for transmitter and integral mounting

Ta=70C, Type 6P, IP68 – for remote sensor type, IP67 on DN10 to 32 [3/8 to 11/4 in.NB])

FET, FEV, FEW and FEF DN700 to 2200 (27/28\* to 84 in. NB) only

#### Declaration of Conformance

Copies of CE certification will be available on request.

WaterMaster has OIML R49 Certificate of Conformity to accuracy class 1 and 2 (FEV DN40 to 200 [1½ to 8 in.NB]).

Copies of accuracy certification are available on request.

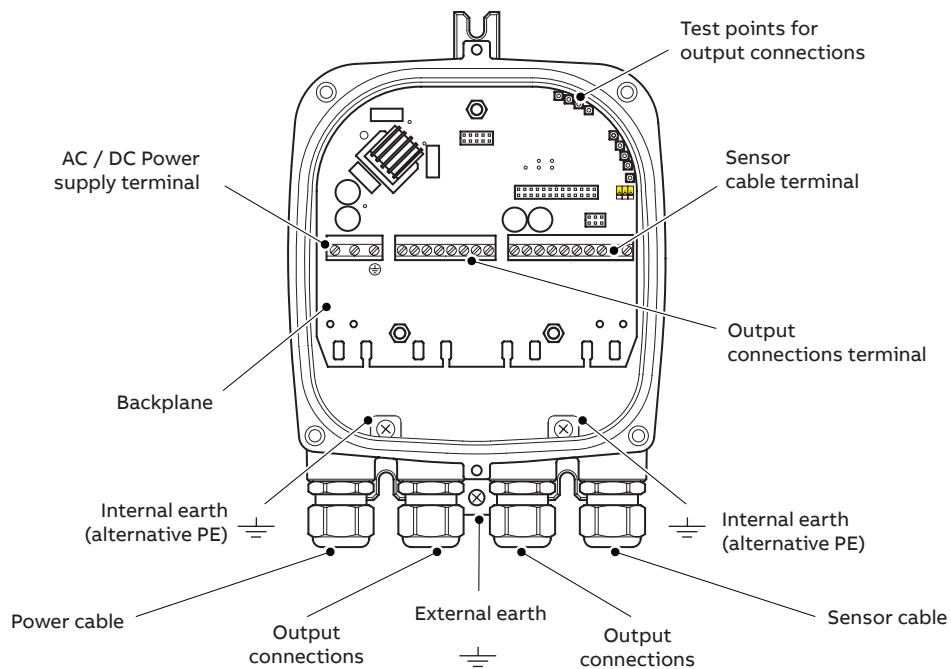

WaterMaster (FEV DN40 to 200 [1½ to 8 in.NB]) has been type examined under directive MID 2004/22/EC, Annex MI-001. Copies of this certificate are available on request.

\* When installed, do not leave galvanically isolated circuits (pulse and current) floating.

## Transmitter connections

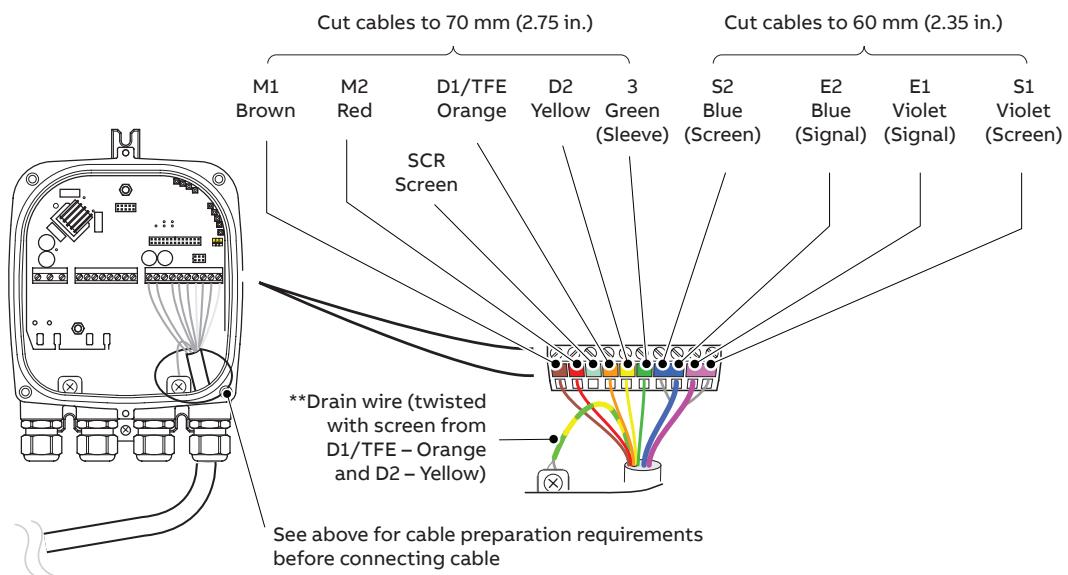

### Transmitter terminal connections overview

This section is intended to give an overview of installation of a flowmeter. For Installation requirements, technical information and Health and safety precautions – refer to the User Guide OI/FET100-EN.

Cable gland / conduit entry (Remote transmitter shown)

### Sensor cable terminal connections and recommended cable lengths

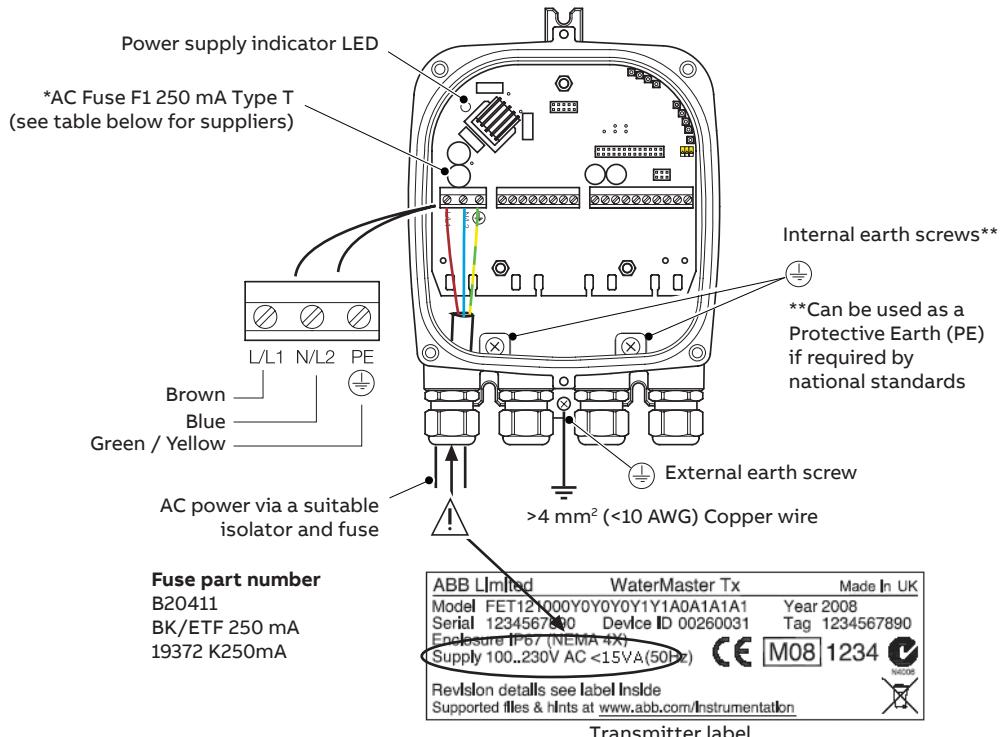

\*Inner wire

\*\*For cathodically-protected systems (or if the transmitter enclosure does not have an earth screw). Connect the drain wire to terminal SCR.

**Sensor cable connections at transmitter terminal block – remote transmitter**

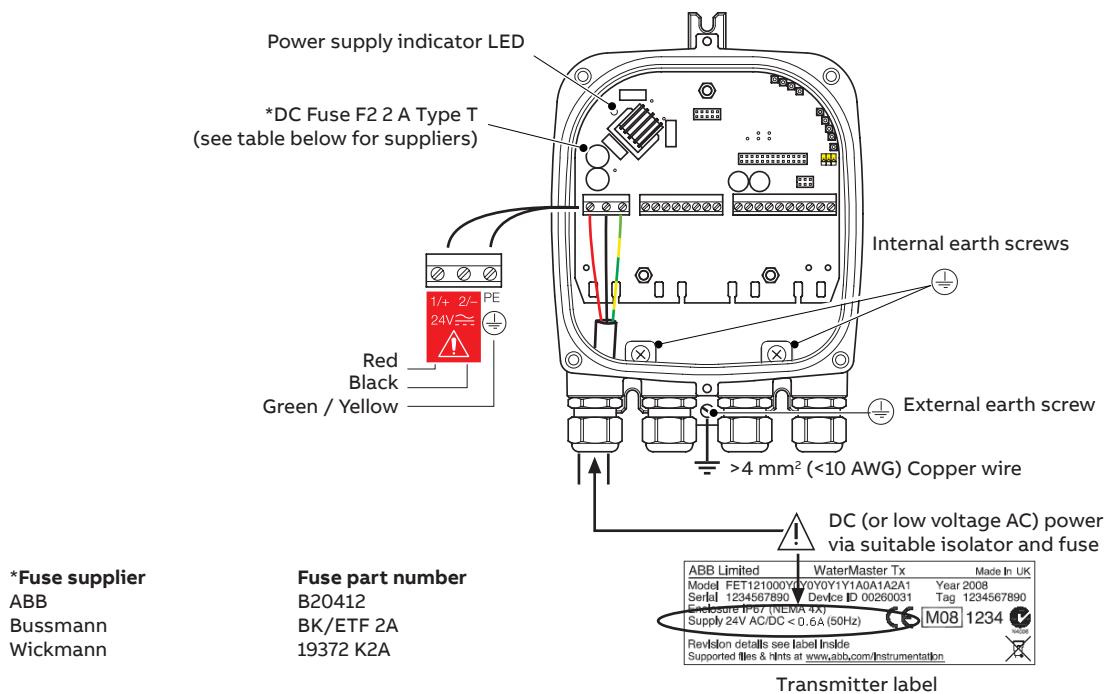

## Power supply connections

### AC power supply

### AC power supply connections

### DC (and low voltage AC) power supply

### DC (and low voltage AC) power supply connections

## ...Transmitter connections

### Configuration DIP switches

Three configuration DIP switches are mounted on the transmitter backplane board.

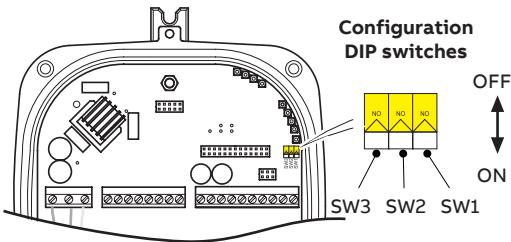

These are factory-set as follows:

- Remote transmitter – all OFF
- Integral transmitter – SW3 ON

For MID-compliant flowmeters the read-only / MID protection switch is set to 'ON' to ensure the meter is secure from tampering.

For HART software versions prior to 01.02.XX, this switch (set after commissioning) prevents login via the keypad or bus at any security level.

From HART software version 01.03.XX onwards and for all PROFIBUS software versions, on MID meters, all metrological-related parameters are locked and inaccessible at the Service level. Standard and Advanced user level parameters can still be modified via the HMI or bus.

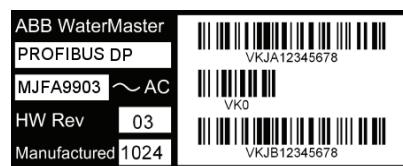

#### DIP Switch functions

SW1 – Read-only / MID Protection  
SW2 – (future product)  
SW3 – Internal sensor memory

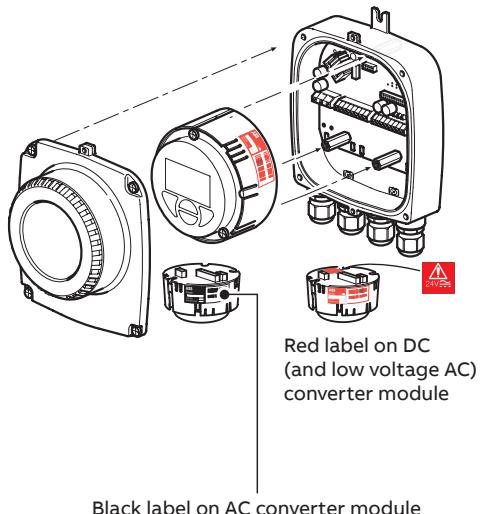

#### Configuration DIP switches

### Transmitter module identification

**Note.** The communications bus type is HART FEX100 if not specified on the transmitter module label. An example of the PROFIBUS FEX100-DP variant transmitter module label is shown below.

PROFIBUS FEX-100P label

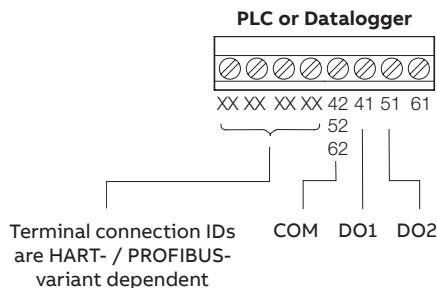

Black label on AC converter module

### Transmitter module identification

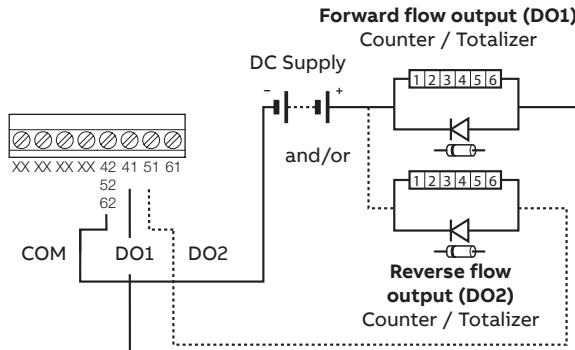

## Output connections

### Frequency outputs

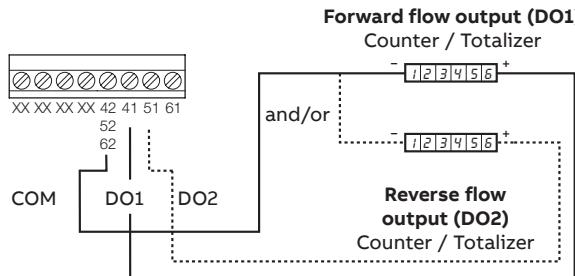

### PLC / Datalogger connections

**Note.** Digital outputs DO1 and DO2 are polarity sensitive. The common (negative) connection for these outputs is designated 'COM'.

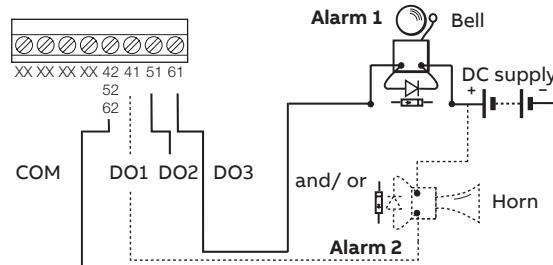

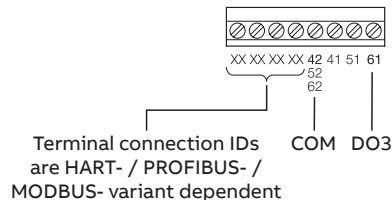

### Electromechanical connections

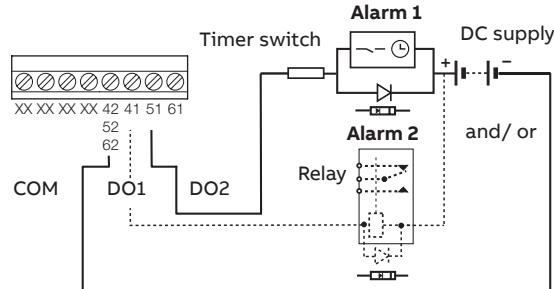

### Telemetry / Electronic counters connections

### Alarm outputs

### Note.

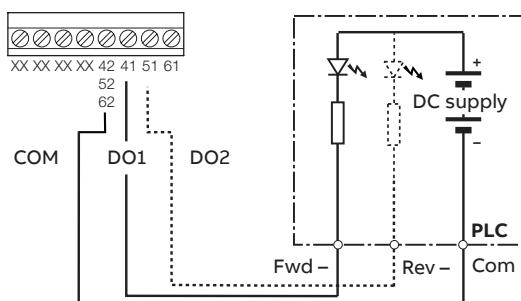

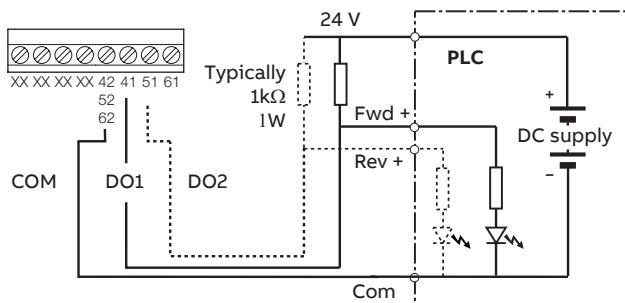

- Normal alarm / logic output is from DO3 (terminal 61). DO1 (41) and DO2 (51) can also be configured as alarms if required but are then NOT available as frequency / pulse outputs as shown in **Electromechanical connections** and **Telemetry / Electronic counters connections**, opposite.
- Bell and horn shown for example only. Any suitable alarm device may be used (for example, lamp, siren, buzzer etc.).

**Note.** Relay and timer switch shown for example only.

## ...Output connections

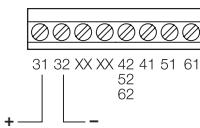

### PLC interface

### Note.

- WaterMaster digital outputs are NPN optocoupled transistors used as switches.
- Maximum allowed voltage at collector is 30 V DC
- Maximum allowed current across transistor is 220 mA.

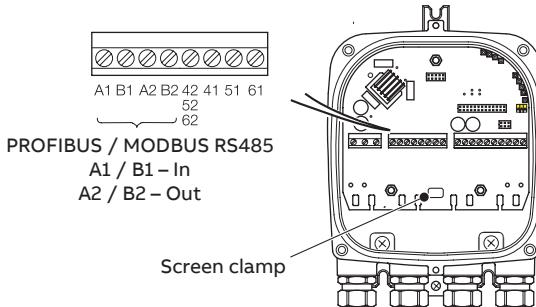

### Current output (4 to 20 mA) – HART (FEX100) variant

Refer to IM/WMP for HART-Protocol communication details

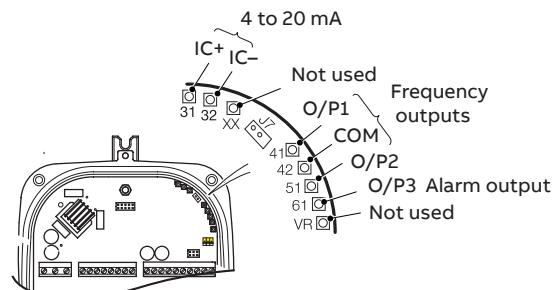

### Current output (4 to 20 mA) – HART (FEX100) variant

### RS485 communications – PROFIBUS (FEX100-DP) and MODBUS (FEX100-MB) variants

### Test point access

**Note.** A typical DVM probe can access (fit) the PCB's test holes.

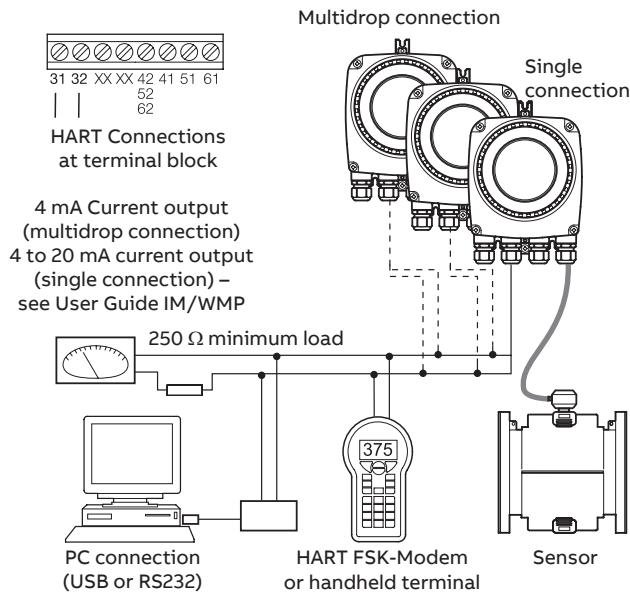

\*These 2 test points are connected on the HART FEX100 backplane only (they are present on the PROFIBUS FEX100-DP / MODBUS FEX100-MB backplane but not connected)

## Digital communication

The transmitter has the following options for digital communication.

### HART protocol

The unit is registered with HART Communication Foundation.

### HART protocol

Configuration	Directly on the Device Software Asset Vision Basic (+ HART – DTM)
Transmission	Install a HART modem (FSK [Frequency Shift Keyed]-Modem) for HART-Communication when connecting to a PC. The HART-Modem converts the analog 4 to 20 mA signal into a digital output signal (Bell Standard 202) and connects to the PC using a USB (or RS232C) connector
Max. signal amplitude	1.2 mA
Current output load	Min. 250W, max. = 560W
Cable	AWG 24 twisted
Max. cable length	1500 m (4921 ft.)
Baud rate	1.200 baud

### System integration

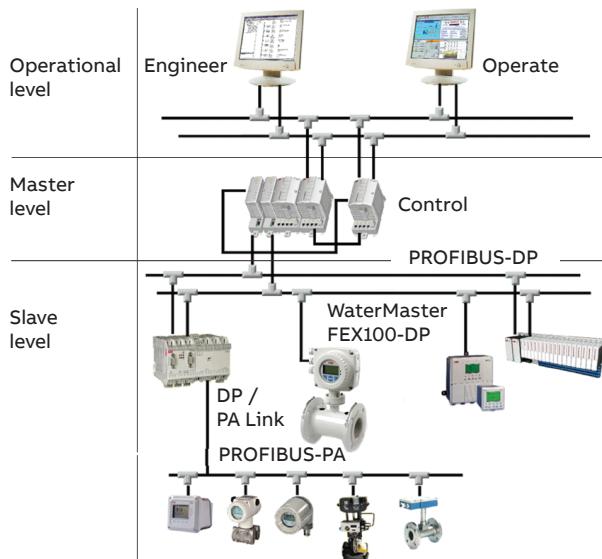

WaterMaster can be integrated into control systems and configuration devices using any Frame application, such as ABB AssetVision or similar third-party applications. ABB Device Type Managers (DTMs) for WaterMaster provide a unified structure for accessing device parameters, configuring and operating the devices and diagnosing problems. FDT (Field Device Tool) technology standardizes the communication and configuration interface between all field devices and host systems.

### PROFIBUS DP protocol

PROFIBUS is a manufacturer-independent, open Fieldbus standard for a wide range of applications in manufacturing, process and building automation. Manufacturer independence and openness are ensured by the international standard EN 50170.

PROFIBUS DP ID no.	0x3431
Alternative standard ID no.	0x9701 or 0x9741
Configuration	Directly on the device Software Asset Vision Basic (+PROFIBUS DP-DTM)
Transmission signal	Accuracy to IEC 61158-2
Cable	Shielded, twisted cable (accurate to IEC 61158-2, types A or B)

All devices are connected in a bus structure ('line') as shown in below. Up to 32 stations (master or slaves) can be linked to create one 'segment', although it is recommended not to install more than 16 devices on a single segment. Each end of a segment must be terminated by an active bus terminating resistor. Both bus terminators must always be powered to ensure fault-free operation, therefore it is strongly recommended that they are connected to a back-up power supply. The use of bus amplifiers (repeaters) and segment couplers can be used to extend the network.

## ...Digital communication

### System integration

The GSD file for WaterMasters specifies the device-specific Ident No. 3431. It conforms to the PROFIBUS standard, providing a clear and comprehensive description of each instrument in a precisely defined format.

This enables the system configuration tool to use the information automatically when configuring a PROFIBUS bus system.

The ABB GSD file (Ident No. 3431) is divided into 2 sections:

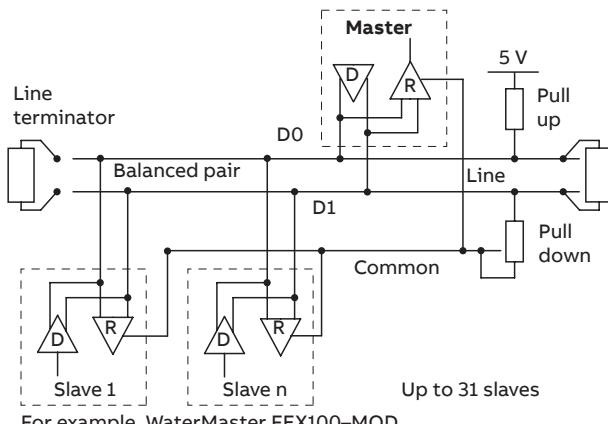

- General specifications
  - Identification of the device, together with hardware and software versions, baud rates supported and the possible time intervals for monitoring times.
- DP slave-related specifications
  - Information about the user parameter block for device-specific configuration and modules containing details of the input and output data that can be exchanged cyclically with a PROFIBUS master.

The WaterMaster GSD file (ABB\_3431.gsd) is available for download from the ABB website at: [www.abb.com/fieldbus](http://www.abb.com/fieldbus) (follow the link for PROFIBUS DP field devices).

### MODBUS protocol

MODBUS is an open standard that is owned and administered by an independent group of device manufacturers called the Modbus Organization ([www.modbus.org](http://www.modbus.org)).

Using the MODBUS protocol, devices from different manufacturers exchange information on the same communications bus without the need for special interface equipment. WaterMaster FEX100-MB follows the specification for Modbus Over Serial Line V1.02, using 2-wire TIA/EIA-485 (RS485) physical layer.

### Cable Properties

The end-to-end length of the trunk cable must be limited. The maximum length depends on the Baud rate, the cable (gauge, capacitance or characteristic impedance), the number of loads on the daisy chain and the network configuration (2-wire or 4-wire).

For 9600 Baud rate and AWG26 (or wider) gauge, the maximum length is 1000 m (3280 ft.). Where 4-wire cabling is used as a 2-wire cabling system the maximum length must be divided by 2. The tap cables must be short, never more than 20 m (65.6 ft.). If a multi-port tap is used with n derivations, each one must have a maximum length of 40 m (131 ft.) divided by n.

The maximum serial data transmission line length for RS485 systems is 1200 m (3937 ft.). The lengths of cable that can be used are determined by the cable type, typically:

- Up to 6 m (19.7 ft.) – standard screened or twisted pair cable.
- Up to 300 m (984 ft.) – twin twisted pair with overall foil screen and an integral drain wire – for example, Belden 9502 or equivalent.
- Up to 1200 m (3937 ft.) – twin twisted pair with separate foil screens and integral drain wires – for example, Belden 9729 or equivalent.

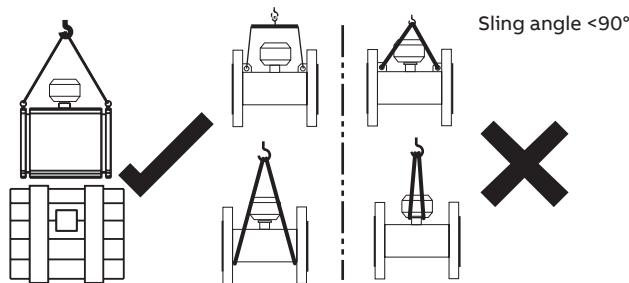

Category 5 cables may be used for RS485-MODBUS to a maximum length of 600 m (1968 ft.). For the balanced pairs used in an RS485-system, a characteristic impedance with value higher than 100W is preferred especially for 19200 and higher Baud rates.

## Installation requirements

This section is intended to give an overview of installation of a flowmeter. For Installation requirements, technical information and Health and Safety precautions refer to User Guide OI/FEF/FEV/FEW-EN.

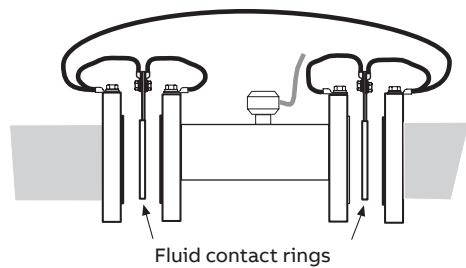

### Unpacking the flowmeter

Care must be taken when lifting the flowmeter to use the lifting hooks provided or sling under the body of the meter. Never lift using the terminal connection box of the sensor cable as this will cause damage and invalidate warranty.

### Grounding

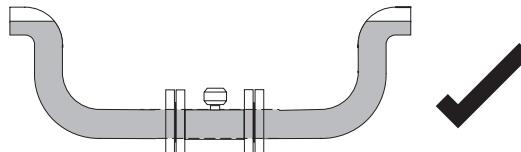

The flowmeter sensor must be cross-bonded to the upstream and downstream pipes. For technical reasons, this potential should be identical to the potential of the metering fluid. The fluid connection is made by installing 2 fluid contact rings (for grounding).

### Mounting

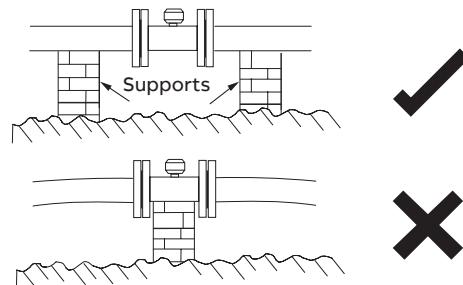

The installation conditions shown below must be observed to achieve the best operational results.

The sensor tube must always be completely full.

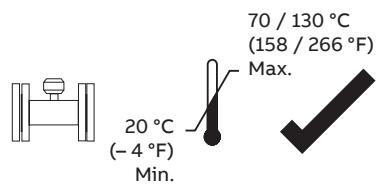

The flow direction must correspond to the identification plate. The device measures the flowrate in both directions. Forward flow is the factory setting.

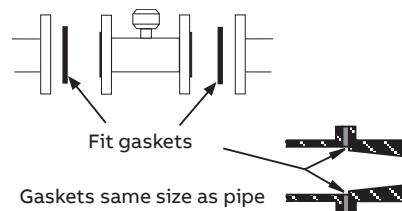

The devices must be installed without mechanical tension (torsion, bending). If required support the pipeline.

The flange seals must be made from a compatible material for the fluid and fluid temperatures if required.

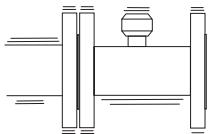

Seals must not extend into the flow area since possible turbulence could influence the device accuracy.

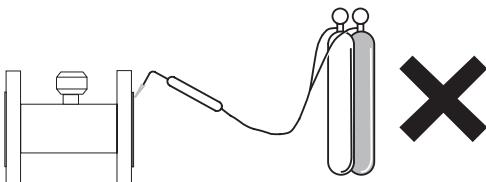

## ...Installation requirements

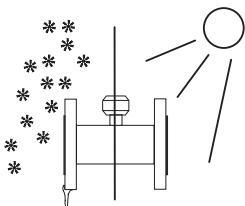

The pipeline may not exert any unallowable forces and torques on the device, such as vibration.

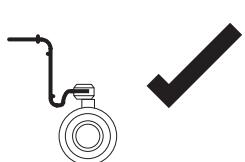

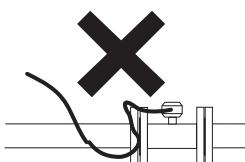

The flowmeter must not be submitted to any localized heat during installation; take care to remember this is a measuring instrument.

The flowmeter must not be exposed to direct sunlight or provide for appropriate sun protection where necessary.

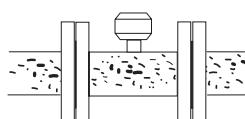

The cable to the flowmeter should be installed neatly or within a conduit, both loose or conduit should have a u shape below the terminal connection box height to allow any water run off to avoid any capillary action into the flowmeter sensor.

Ensure a maximum 6 % dry solids content flow through pipe – for higher dry solids content, refer to ABB's ProcessMaster range.

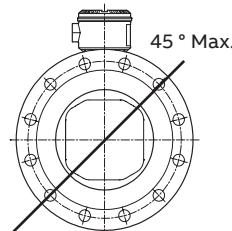

≤6 % (max.)  
dry solids

### Electrode axis

Electrode axis should be horizontal if at all possible or no more than 45° from horizontal.

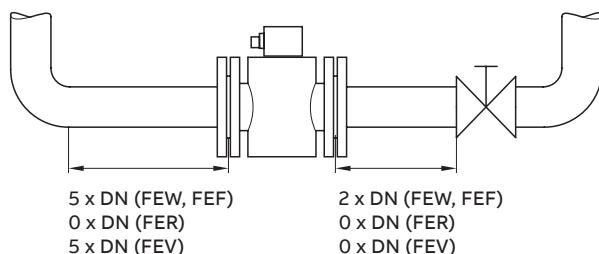

### Upstream and Downstream pipe sections

The metering principle is tolerant of the flow profile.

- Wherever possible do not install fittings (for example, manifolds, valves) directly in front of the flowmeter sensor.
- Butterfly valves should be installed so that the valve plate does not extend into the flowmeter sensor.
- Valves or other turn-off components should be installed in the Downstream pipe section.

Experience has shown that, in most installations, straight upstream sections 3 x DN long and straight downstream sections 2 x DN long are normally sufficient. We would recommend conditions of 5 x DN straight upstream and 2 x DN straight downstream where possible.

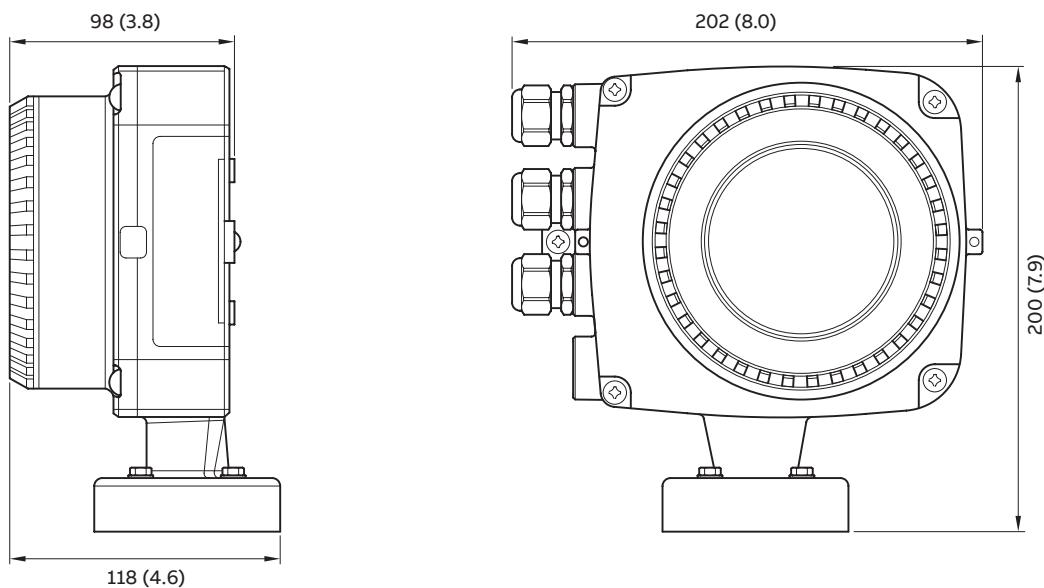

For reduced-bore meters (FER), these straight pipe sections are often not necessary.

## Transmitter dimensions

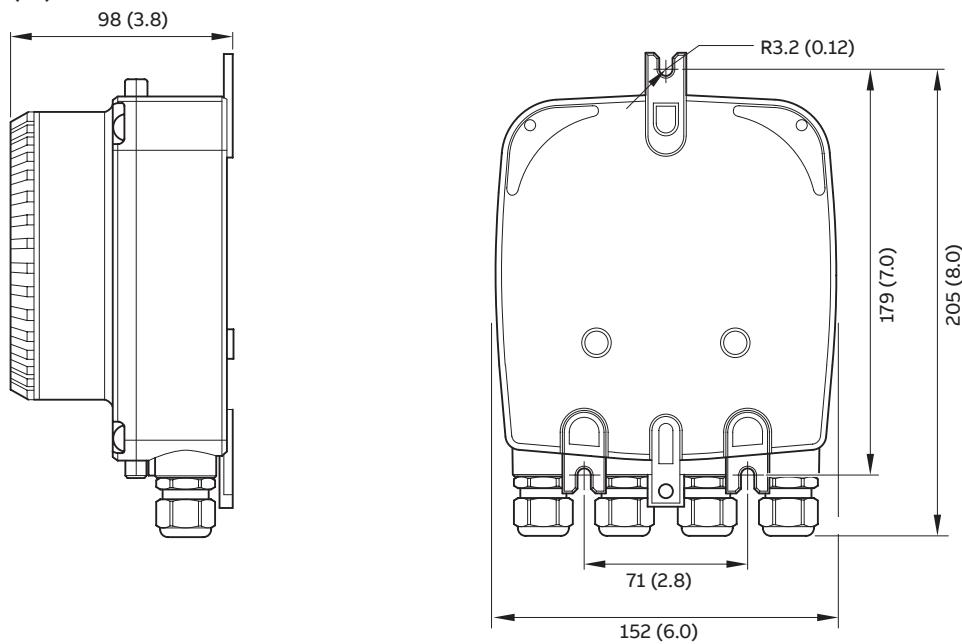

### Integral transmitter

<b>Other usage</b>																
Measuring Instruments Directive (MID)												CM1				

\*The transmitter converter module Input and Output Signal Type must match the transmitter backplane output configuration (HART or PROFIBUS) – see OI/FET100-EN.

\*\*Add codes for options.

## Common accessories

Accessory	Item number
WaterMaster AC Fuse F1 Type T 250 mA A/S TR5	B20411
WaterMaster DC Fuse F2 Type T 2 A A/S TR5	B20412
WaterMaster Infra Red Comms Pack	MJBX9932
WaterMaster Backplane PCB Board (STD)	WATX2505
WaterMaster Sensor PCB Board	WATX2506
WaterMaster Comms Cable	WEBC2500
Signal cable for remote WaterMaster transmitter	
5 m (15 ft.)	STT4500/05
10 m (30 ft.)	STT4500/10
20 m (60 ft.)	STT4500/20
30 m (100 ft.)	STT4500/30
50 m (165 ft.)	STT4500/50
80 m (260 ft.)	STT4500/80
100 m (325 ft.)	STT4500/100
150 m (490 ft.)	STT4500/150
500 m (1650 ft.)	STT4500/500
Armored signal cable for remote WaterMaster transmitter	
5 m (15 ft.)	STT4501/05
10 m (30 ft.)	STT4501/10
20 m (60 ft.)	STT4501/20
30 m (100 ft.)	STT4501/30
50 m (165 ft.)	STT4501/50
80 m (260 ft.)	STT4501/80
100 m (325 ft.)	STT4501/100
150 m (490 ft.)	STT4501/150
500 m (1650 ft.)	STT4501/500
